LANGUAGES

Ukrainian	Native
English	B2

TECHNICAL SKILLS

- Java, TypeScript, Angular, Python
- MySQL, PostgreSQL, Oracle,
- MongoDB, DynamoDB, Redis
- Liquibase, Flyway
- Spring Boot, Spring Data JPA, Spring MVC, Spring Security, Spring Cloud, Spring Batch, Spring AOP
- JWT, OAuth 2.0
- AWS: ECS, Lambda, S3, SQS, SNS, API Gateway, Bedrock, CloudWatch, AppConfig, ECR, EMR, EC2, Fargate, ELB/ALB
- Docker, Kubernetes, Helm, Terraform
- Apache Kafka, MQTT, RabbitMQ
- Maven, Gradle, Jenkins, GitHub Actions
- Hibernate, JDBC, JOOQ
- JUnit, Mockito, JMeter
- API & Query: GraphQL
- Kibana, Instana, Grafana
- Spark, Databricks
- Microservices, Serverless, Monolithic, Event-driven
- REST API, OpenAPI/Swagger, Semantic Versioning
- LLM integration, AI-powered solutions, Perceptual Hashing

SUMMARY

Senior Java Backend Engineer with 5+ years of experience in building and modernizing scalable enterprise solutions. Expert in Java 21, Spring Boot 3.5, and AWS ecosystem (ECS, Lambda, Bedrock). Proven track record in architecting AI-native platforms that reduced operational costs by \$16,000+ monthly and automated manual efforts by 58%. Specialist in high-load migrations, event-driven architectures, and technical leadership within the Retail, Healthcare, Real Estate and IoT domains.

EDUCATION

Master of Science, Computer Engineering	Sep 2021 - Sep 2022
Lviv Polytechnic National University Specialty: Specialized Computer Systems	
Bachelor of Science, Computer Engineering	Sep 2017 - Sep 2021
Lviv Polytechnic National University Specialty: Specialized Computer Systems	

EMPLOYMENT

Senior Software Engineer (EPAM)	Sep 2022 - Present
Project	Enterprise Platform Modernisation and Optimisation
Description	Full-cycle software development, including architecture planning, API design, performance tuning, and legacy system optimization

Responsibilities:

- Led migration from Java 8/Spring Boot 2.2 to Java 21/Spring Boot 3.4, resolving critical dependency issues
- Coordinated integration across 8 teams, ensuring smooth large-scale system transition
- Mentored engineers and improved code quality, test coverage, and maintainability
- Built LLM-based optimization solution (GPT-4o) saving \$16,000+/month
- Developed high-performance REST APIs and integrated external services
- Optimized legacy systems (performance, memory, multithreading)
- Designed scalable data processing solutions and contributed to Spark jobs processing 4M records
- Collaborated with product and QA to deliver reliable, high-quality releases

EMPLOYMENT

Senior Software Engineer (GazdAI - self project)

Dec 2025 - Mar 2026

Project	Real estate platform with AI-core and automated processes
Description	Architected and deployed a cost-optimized, AI-native platform on AWS, leveraging event-driven systems and automated pipelines to drastically reduce operational costs while enhancing performance and scalability.
Responsibilities	• Led AWS cloud architecture (Docker, Terraform, Fargate), delivering a cost-efficient MVP • Built AI-native platform core with event-driven architecture • Developed AI pipelines for content enrichment and moderation (text + media) • Reduced AI processing costs by 35% via image deduplication (perceptual hashing) • Cut LLM usage costs by 640% through search optimization and caching • Improved system performance and cost efficiency via caching, WebP normalization, and API minimization

Team Lead (EPAM Systems)

Jul 2025 - Aug 2025

Project	AWS Bedrock AI Scheduling and Management Agent
Description	Led and directed a cross-functional development team during an internal EPAM AI Marathon to build an AWS Bedrock-powered AI Scheduling and Management Agent
Responsibilities	• Led a technical team (1 DevOps, 4 Software Engineers). • Delivered a solution that reduced manual scheduling efforts by 58% and streamlined the end-user experience for finding and booking technicians. • Organized daily sync technical meetings and shared knowledge with the team to drive collective improvement. • Coordinated team workflows, aligned tasks with project milestones, and ensured timely delivery of a fully functional MVP by fostering collaboration and proactively resolving blockers.

Java Software Engineer (EPAM Systems)

Oct 2021 - Aug 2022

Project	Retail and Distribution AI-Driven Personalisation Platform
Description	Large-scale retail and distribution improvement program integrating AI-driven personalisation and enhancing data processing pipelines
Responsibilities	• Delivered features and optimized services (performance, maintainability) • Built Spring Boot utility for Graph DB data migration • Improved Kubernetes orchestration (probes, namespace migrations) • Enhanced monitoring and alerting (Instana, Grafana, Kibana) • Migrated Java 8 to 11 and upgraded Spring Boot • Increased test coverage (JUnit, Mockito) and maintained OpenAPI docs • Improved CI/CD pipelines and supported distributed team delivery

EMPLOYMENT

Full-Stack Engineer (CyberDone - self project)

Sep 2021 - Jun 2022

Project Precision Hydroponics Control System

Description An integrated system that automates hydroponic cultivation by precisely controlling nutrient delivery through a dedicated device. It includes a user-friendly web interface for real-time monitoring, parameter management, and template-based configuration to simplify setup and operation.

Responsibilities

- Designed and implemented a comprehensive solution control system specifically for hydroponics applications
- Developed software for embedded systems, primarily utilising ESP32 microcontroller-based hardware
- Designed and implemented a dedicated API enabling efficient, reliable data transmission via MQTT and RabbitMQ

Junior Software Engineer (EPAM Systems)

Jun 2021 - Sep 2021

Project Translation Automation Platform

Description Translation improvement program based on adopting automatic translation flows and reducing manual translation

Responsibilities

- Implemented new features according to business requirements
- Enhanced unit test coverage to meet production quality gates
- Performed code refactoring and optimization
- Presented product demonstrations to stakeholders at key development stages
